

CALIBRATION OF APOLLO UV & WHITE LIGHT METER

Labino AB is an ISO 9001-2015 calibration lab with scope in UV and White light calibrations. We are audited by the Swedish body SWEDAC and our accreditation number is 10391. Our calibration values are traceable, accurate and documented as per the ISO/IEC 17025 standard requirements.

Authorized Apollo Calibration Centers

Please be informed that the companies listed below are authorized by Labino AB to calibrate the Apollo UV and White Light meter. All authorized calibration centers below follow a specific calibration process proprietary to Labino, all have the same equipment, and all receive the same training.

As the NDT industry has not succeeded to adopt any calibration standards for UV meters, calibration labs that do not have access to the Apollo master units, software, equipment, and process might not be able to perform the calibration with the same level of accuracy, and some, fail entirely. This is an industry wide problem which you can independently verify by comparing meters calibrated by different labs. They most often show different values and the deviations can be quite large. This can lead to violations of pledged standards that have UV irradiance and white light illuminance limits (such as ASTM, Rolls-Royce RRES 9001, Airbus AITM6-1001) and consequently, production stops.

We strongly advise you to contact one of the Authorized Calibration Centers listed above for your future recalibration needs. By doing so, you **earn a 4-year warranty (from purchasing date), at no extra cost.**

Please note that Labino does not make any revenues when you recalibrate your Apollo meter at an authorized center, we only preserve the quality and accuracy of our product. We would be happy to answer any questions you may have.

Kind Regards,

Marios Athanasiadis
Managing Director
